STANDARD STOCK COLORS
HIGH PERFORMANCE FLUOROPOLYMER COATINGS

Superior performance coatings designed to provide aesthetically pleasing colors while providing exceptional performance levels.

Fluoropolymer based powder coatings designed to meet and exceed the stringent requirements of the American Architectural Manufacturers Association (AAMA).

Meets or exceeds performance levels set forth in AAMA 2605 (supersedes AAMA 605.2) voluntary specifications.

Fluoropolymer resin systems outperform all other paint coatings for resistance to weathering, chalking, fading, gloss retention, and ultraviolet degradation.

Excellent resistance to airborne chemicals, acid rain, salt air, and cleaning solvents.

The use of only premium inorganic pigments ensure vivid colors with superior color fastness.

Film thickness of 2.5 - 3.5 mills is twice the thickness of liquid coatings. This means extra protection against corrosion and chemical penetration.

Harder finish (2H-3H) versus liquid paints (HB-H), offering superior scratch and abrasion resistance along with overall durability.

Environmentally friendly product as it is free of Volatile Organic Compounds (VOC's), solvents, and HAP emissions.

Manko Windows Inc. is a licensed applicator of Fluoropolymer powder coatings.

Custom and metallic colors are available within the limitations of durable color pigments. Custom colors may require additional lead time and charges.

Manko Window Systems Inc. utilizes a multi-stage high tech pretreatment system for proper pretreatment and conversion coating of aluminum extrusions prior to painting.

Paint is electrostatically applied to assure uniform thickness of coating and to eliminate sags, runs, and other serious blemishes.

These color chips are as close as possible to actual paint color, however, color chip reproduction has limitations. Manko Window Systems Inc. strongly recommends final color approval of actual production line samples. Manko Window Systems Inc. does not guarantee that these colors will match those of other companies despite the color names being identical.
