## HISTORICAL – SINGLE HUNG ■ DOUBLE HUNG

Manko's heavy duty 5500 series single and double hung window system was designed with a putty glazed bevel look and the intention of meeting the replication of historical windows. Originally marketed as a replacement window, this series has displayed numerous uses in new construction projects, including residence halls, schools, office, and administration buildings. The 5500 series' design includes pour and debridged thermally broken main frame and operable sash to provide improved thermal efficiency. Main frame and operable sash construction is mortise and tenon joinery with dual integral screw races. For added durability, the operable sash smoothly slides with either spiral, block & tackle, or ultra-lift balances. If your project is seeking a quality single or double hung window with a historical profile, Manko's 5500 series may be the perfect fit.

### Performance Results:

- ⇒ AAMA — AW-PG75-H
- ⇒ Air Infiltration — 0.3 CFM\*
- ⇒ Water Resistance — 12 PSF\*

\*Minimum gateway performance values listed, product meets or exceeds values

### Features

- ⇒ 4 1/16" overall frame depth
- ⇒ 1" insulated glass, structurally glazed
- ⇒ Operating sash removable by side load method
- ⇒ Dual finseal weathering on operating sashes
- ⇒ Preglazed at factory for added quality control
- ⇒ Extruded screen frames with aluminum screen wire
- ⇒ Interior / exterior applied & between glass muntins
- ⇒ Standard & custom panning systems available
- ⇒ Interior snap trims available
- ⇒ Receptor systems available w/optional starter sill
- ⇒ Full range of anodized & AAMA 2605 painted finishes
