450

When it comes to utilizing a storefront system on your project, Manko has a wide variety of options to choose from, including our non-thermal 450 system. This system has been a staple in the Manko portfolio for a number of years, providing projects a quality, cost effective system that can meet non-thermal framing needs. The 1/4" glaze 450 system has the typical storefront 4 1/2" overall depth with an option for either a 1 3/4" (450—1 3/4") or 2" (471) face dimension. With the system's non-thermal design, the 450 is typically utilized in interior applications where a thin profile system is desired. The 450 is limited in its exterior uses however, typically seen only where u-value and condensation resistance numbers are not of importance, please refer to Manko's windload charts for structural capabilities. Look no further, Manko's 450 storefront system can be a quality addition to your next project.
